How does Drive Vaccine PC Restore Plus work?

1. It takes 1 minute to setup Drive Vaccine PC Restore Plus. The setup creates a baseline snapshot.
2. You can configure Drive Vaccine PC Restore Plus to restore the baseline snapshot during restart, logoff, daily, weekly or monthly. Restore only takes seconds.
3. To include changes to the baseline snapshot, you update the baseline. The new baseline will contain everything on the hard drive at the time of updating the baseline. Update baseline only takes 5 seconds without rebooting the PC.

How to Setup Drive Vaccine PC Restore Plus?

Drive Vaccine PC Restore Plus provides you a variety of setup options ranging from single computer setup to hundreds or thousands of network deployment.

To setup Drive Vaccine PC Restore Plus on a single computer, use **Default** or **Custom Setup** options.

Custom Setup allows you to configure the program settings yourself, such as where to copy the program files to, what

drives to monitor, enable or disable program access control and more.

Default Setup will set the program settings to default values for you, such as copy program files to C:\Program files\shield folder; Default setup will only protect the C partition; and disable access control.

To deploy Drive Vaccine PC Restore Plus to a network of PCs with same program settings, use **Advanced Setup.**

Advanced Setup will read in the program settings from a setup configuration file, **setup.cfg.**

You can create your own **setup.cfg** configuration file using **Advanced Setup Configuration Wizard** (ASCW) provided in the support folder on the program CD.

With **Advanced Setup,** you can mass deploy Drive Vaccine PC Restore Plus with Windows active directory, SMS software deployment tools, Network logon scripts, or Ghost images.

How to uninstall Drive Vaccine PC Restore Plus?

You can **uninstall** Drive Vaccine PC Restore Plus from Windows Add/Remove programs.

How to restore baseline?

To restore system to the baseline snapshot, simply reboot the PC.

Restore baseline if Windows fails to startup while the restore is disabled, to restore baseline if Windows fails to startup while the restore is disabled for system updates, hold

down the **HOME** key during startup. Select Restore Now from Drive Vaccine PC Restore Plus subsystem console.

How to update baseline?

After updating new software or settings on your systems, you want to expand the baseline snapshot to include the changes. Expand the baseline snapshot takes 3 seconds without rebooting the PC.

To update baseline, right click the Drive Vaccine PC Restore Plus icon in the computer's system tray area and select Main Menu on the popup menu. In the Main menu, select Restore setting and the Update Baseline command.

To update baseline with a command line, to update the baseline in a batch file, include the following command line switch in your batch file: "shieldcmd.exe /snapshot /u "administrator" /p "password"
